

Traffic Related Products

Tire-derived products used in traffic related applications include delineators, bases for signs and traffic channelizer systems, parking stops and traffic-bearing expansion joints. Their durability, flexibility and softness can provide enhanced performance compared to alternative products.

Traffic Related Product Benefits May Include:

- Able to withstand vehicle impacts while minimizing vehicle damage
- Durable and resilient to diverse climates
- Long-lasting with low degradation when exposed to the elements
- Low installation and maintenance free
- Lower weight compared to competing products made with concrete or steel
- Flexible design to accommodate diverse needs and specifications
- Cost effective

Traffic Related Product Applications May Include:

- Reboundable and universal base systems
- Delineator and sign systems
- Traffic and work flow channelizer systems
- Parking lots
- Traffic-bearing expansion joints and seismic transition joints
- Parking or dock bumpers
